

BUSEGA DISTRICT COUNCIL
CHEMISTRY FORM ONE TERMINAL MARKING SCHEME -2026

1.

(i)	(ii)	(iii)	(iv)	(v)	(vi)	(vii)	(viii)	(ix)	(x)
C	D	C	A	D	A	A	B	C	C

1 mark @=10marks

GEPAM science hub

WhatsApp 0748978398

2.

LIST A	(i)	(ii)	(iii)	(iv)	(v)
LIST B	C	D	B	E	A

1 mark @=5marks

3.(a)- Essential in making drugs and vaccines used to treat and prevent diseases

-It improves crop yield through fertilisers

-Every day materials are produced using chemicals

1 mark @=4marks

-it helps identify pollutants in air, water and soil and provides solutions

(b) (i) it is used in the manufacture of fertilisers, pesticides and weed killers that improve crop yield 2marks @=6marks

(ii) it is used to produce drugs and vaccines that treat and prevent diseases

(iii) it is used to manufacture fuels such as petrol and diesel that are used in engines of cars and ships

4.(a) (i) Doctor

(ii) Nurse 1 mark @=4marks

(iii) Teacher

(iv) pharmacist

(b)(i)-Beaker -used for measuring, holding and heating liquid

(ii) Measuring cylinder-used for measuring volume of liquids 1 mark @=6marks

(iii) Pipette-used for measuring fixed volume of liquids

(iv) Test tube -used for holding chemicals or heating substances for short period of time

(v)Thermometer-used for measuring body temperature

(vi)Gas jar -used for collecting gas

5.(1)Fragile

(2)Flammable/inflammable

(3)Corrosive 2marks@=10marks

(4)Toxic

(5)Oxidant

6a) -Solid eg wood and ice

- liquid eg water and milk

- gas eg oxygen and hydrogen

b. freezing

- vapourisation

- condensation

- condensation

7.(a)blue flame or non -luminous flame 1mark

REASONS

-produces more heat

-no soot formation 1mark@=4marks

-efficient fuel use(complete combustion)

-less smoke and safe air

(b) (i)Class F 1mark

(ii)-Wet chemical fire extinguisher because it contains a special solution (potassium based) that react with hot oil to form a soap like layer which prevent oxygen from reaching the oil and stopping re-ignition 2marks @=4marks

-dry powder fire extinguisher because it works by smoothening the fire and interrupting the chemical reaction

8.(a)(i)physical change

(ii)physical change

(iii)physical change 1mark @=6marks

(iv)chemical change

(v)chemical change

(vi)chemical change

(b)-Diffusion of perfume in air

9.a. accident in the laboratory

- fires and fire explosion

- electric shock

- chemical burn

- glassware breakage

Inhalation of toxic gases/fume

b. causes

- spill of chemicals in floor

- swallowing of harmful chemicals

- gas leakage

- Touching electrical equipment with wet and bare hands

- Improper disposal of chemical wastes

10. (a). THE DIAGRAM OF BUNSEN BURNER

Marks distribution

Drawing 4 marks

Labelling 1 mark @=6 marks

- (b).i Close the air holes of the burner
 - ii. Connect the burner to the gas tubing
 - iii. Light a match or wooden splint and hold it on top of the barrel
 - iv. Slowly turn on the gas
 - v. Open the air holes half way and then fully
- 1 mark @=5 marks

-
